Preface

The continuing problem of crime affects all Ohio citizens. It makes victims of us all as we fear for our lives and property and search for solutions. If there are answers to this tragedy of ever increasing crime rates, we must first understand the nature and scope of the problem.

In order to inform all the citizens of Ohio the Attorney General's Office has gathered crime statistics for our State. This is the sixth edition of that publication and could not have been possible without the voluntary cooperation of the Ohio Sheriffs, Police Departments and other participating law enforcement agencies.

It is with the sincere hope that this report will contribute to the understanding of the crime problem that I present *Crime In Ohio 1981* to the people of Ohio.

William J. Brown

WILLIAM J. BROWN
Attorney General

Foreword

The collection of crime statistics is a vital function of the Bureau of Criminal Identification and Investigation. In 1976 this office assumed the responsibility for the receipt of crime reports from Ohio law enforcement agencies. Prior to that time the FBI performed this task. The figures will be used for the national report and hopefully will assist Ohioans in better understanding the crime problem in our state.

This report only includes crimes reported to law enforcement and therefore, is not representative of the total crime in our state. It does not draw conclusions regarding crime or its causes. However, it does attempt to present meaningful data that will assist policymakers and citizens when they approach the crime problem.

These statistics, with their limitations, should be considered in relative terms and not necessarily in the aggregate.

This report would not be possible without the voluntary efforts of the law enforcement contributors. It is submitted in sincere hope that it will assist all Ohioans in understanding one of the most critical social issues of our time.

Identification & Investigation

IN MEMORIAM

This publication is dedicated to the memory of those Ohio law enforcement officers who were killed in the faithful performance of their sworn duties. The entire criminal justice community extends its sympathy to the families of the three law enforcement officers killed in Ohio during 1981.

ACKNOWLEDGEMENT

The Federal Bureau of Investigation's Uniform Crime Reporting Section is gratefully recognized for their assistance in the state level collection of UCR data.

Donna J. Geniesse of the BCI/UCR staff is especially acknowledged for her professionalism and dedication to duty, which made this report possible.

Section 1

The Ohio Uniform Crime Reporting Program

History of Uniform Crime Reporting

Although the impetus for collecting nationwide crime information dates back to the 1890's, no ongoing program was initiated until the Committee on Uniform Crime Records of the International Association of Chiefs of Police (IACP) was established in 1927. This Committee's responsibility to provide management information to law enforcement agencies was eventually turned over to the Federal Bureau of Investigation (FBI) in 1930, when the FBI received a Congressional mandate to collect and disseminate national crime information. The IACP has continued to serve the Uniform Crime Reporting Program (UCR) in an advisory capacity, and has been joined in this responsibility by the Committee on Crime Records of the National Sheriffs' Association.

UCR receives crime information through voluntary reports submitted by over 15,000 individual law enforcement agencies across the country. In 1966, the FBI began coordinating UCR data collection through designated state level agencies which report state-wide information to the FBI each month. The Ohio Bureau of Criminal Identification and Investigation (BCI) is pleased to administer one of the 47 state level UCR programs.

Objectives of Ohio UCR

Because increasing attention has been focused on the problem of crime in our communities in recent years, many segments of our population need more complete information for a variety of reasons.

Ohio citizens are understandably concerned about the possibility of becoming victims of crime. Law enforcement professionals, managers and administrators who must focus on crime in their own jurisdictions, also need to know what is occurring in surrounding jurisdictions in order to deploy personnel and equipment most efficiently. Legislators need state-wide information about crime in order to pass laws that will increase the stability of our society. Researchers and planners need to know what is actually happening to predict trends and recommend changes.

The goal of ***Crime In Ohio*** is to identify the nature and extent of criminal activity in this state and present the information needed by each of these groups. This information will not in itself prevent crime, but it may encourage all segments of society, by understanding the problem, to work together with law enforcement agencies to reduce crime through more effective enforcement.

The objectives of ***Crime In Ohio*** are:

1. To identify the nature and extent of crime in our state;
2. To produce a reliable set of criminal statistics for use in law enforcement administration, operation, and management;
3. To provide our citizens with the most complete indication of fluctuations in the level of crime in our society;
4. To provide legislators with the information necessary to formulate laws which address the crime problem; and
5. To provide sufficiently detailed data for researchers and planners.

Considerations for Interpretation

Statistics are a tool used to summarize information so that patterns or trends become clearer. All statistics must be interpreted with an understanding of just what it is that they can say. Too often information of the type in this report is used incorrectly to draw conclusions that the statistics simply do not support. In order to avoid this error, it is necessary to know what information is included and how it is reported.

To obtain accurate information and to provide nationwide uniformity in the reporting of data, the national UCR program had to adopt standardized definitions for collecting such information as the number of offenses, arrests, clearances, and value of stolen or recovered property. Because of variances in punishment for the same offenses in different state codes, there is no possibility in a program such as this to distinguish between felony and misdemeanor crimes. The methods of collecting and some resulting limitations are explained below.

Classification of Offenses

UCR divides offenses into two major classifications which are designated Part I and Part II offenses. This distinction is important to keep in mind because different information is collected for each. Part I offenses include 1) violent crimes: murder and nonnegligent manslaughter, negligent manslaughter, forcible rape, robbery and aggravated assault; and 2) property crimes: burglary, larceny (theft) and motor vehicle theft. Seven of these Part I offenses (excluding negligent manslaughter), because of their seriousness, frequency of occurrence, and likelihood of being reported to police, serve as a crime index and are used to calculate crime rates (see sections entitled Crime Index and Crime Rate).

All other offenses are classified under Part II (see Definitions section, page 11).

All offenses are classified and reported monthly, on the basis of law enforcement officer investigation in accordance with UCR offense definitions (which will not necessarily be identical to State Code definitions). Because UCR identifies a police problem, offense classifications are not based on the findings of a court, coroner, jury or decision of a prosecutor.

Counting of Offenses

The number of offenses is collected only for Part I crimes and simple assault. Attempts to commit these crimes are also counted as offenses.

The number of offenses is not reported for Part II offenses. The only information collected for Part II crimes is arrest information.

The following are methods for counting the Part I crimes:

For murder and nonnegligent manslaughter, negligent manslaughter, rape, aggravated assault and simple assault, one offense is counted for each victim, regardless of the number of offenders involved.

For robbery and larceny, one offense is counted for each distinct operation which is separate in time and place. The number of victims in any one operation does not determine the number of offenses. For example, if 20 people are robbed in a bar at the same time, only one offense is counted. However, if that robber then leaves the bar and holds up a passerby, a second offense has occurred.

For burglary, one offense is counted for each structure which is illegally entered. However, when the structure is an apartment house, or business or office building in which units are leased for a period of time, one offense is counted for each unit burglarized.

For motor vehicle theft, one offense is counted for each vehicle stolen.

For multiple offenses that occur in one crime incident, *only the most serious offense is counted.* Part I crimes are ranked according to seriousness and appear in order from most serious to least serious under "Classification of Offenses," pg. 7. Example: A robber takes a man's wallet and then beats him causing serious injury. Both a robbery and an aggravated assault have occurred, but because robbery is considered by UCR to be more serious, only the robbery is counted. From one perspective, this method of counting seriously understates the crime problem, but from another, it prevents undue inflation of crime statistics.

Clearances

An offense is considered cleared (solved) in one of two ways: (1) at least one person is arrested, charged, and turned over to the court for prosecution, even though several may have been involved; or (2) by exceptional means when some element beyond police control precludes the physical arrest of an offender. Examples of clearances by exceptional means would be when an offender: commits suicide; makes a dying declaration; confesses while in custody or serving time for another crime; is prosecuted in another jurisdiction for the same offense; is a juvenile who is handled by notifying the parents; or when the victim refuses to prosecute or another jurisdiction refuses to extradite the offender.

Clearances are broken down into the categories of "adult" and "juvenile". A "juvenile" clearance is counted only when juveniles are *exclusively* involved in the clearance of an offense. If the arrest of both adults and juveniles results in a clearance, it is counted as an "adult" clearance.

Note: Not all crimes are cleared within the calendar year in which the offense occurs.

Property Stolen and Recovered

The figures for value of property stolen and recovered are reported only for Part I offenses and do not include such Part II offenses as fraud, forgery or embezzlement.

Questions often arise in evaluating these figures. The values of property stolen and recovered reflect values reported by each agency for only those crimes occurring within each "home" jurisdiction. It does not matter who actually recovers the property or where it was recovered. If it was stolen from a particular jurisdiction, that agency reports the values of stolen and recovered property.

Oftentimes recovered property is in a condition different from what it was at the time of the theft. Although property can increase in value over time, it is more likely that stolen property will be recovered in a damaged condition. It is this market value at the time of recovery that is reported. Therefore, recovery value does not necessarily represent a "clearance rate" for stolen property, and one cannot use it to determine law enforcement effectiveness in recovering stolen goods. Because stolen and recovered property figures indicate thefts and recoveries in the current year, it is important to note that recovered property may have been stolen in a previous year.

Arrests

Arrest information is collected for all Part I and Part II offenses according to the age, sex and race of the offender. It is not possible, however, to correlate race with sex or specific ages because the information is collected independently, thus limiting analysis. Furthermore, arrest figures cannot be directly related to the number of crimes cleared because arrest totals refer to numbers of offenders arrested for each offense, while clearance totals refer to the number of offenses for which an arrest or arrests have occurred.

In the case of an arrest made on multiple charges, only the most serious violation is reported into UCR, as was the rule discussed in "Counting of Offenses".

Reporting Variations

During 1981 Ohio received Uniform Crime Reports from 457 law enforcement agencies. Because the number of reporting agencies is so large, one must be aware that unintentional variations from UCR guidelines may occur that would affect the validity of the data presented here.

Offense totals vary from the actual number of offenses that occur because UCR statistics are based on crimes that are reported to law enforcement agencies and many crimes are not reported. Also, it is possible that a law enforcement agency would submit fewer than the complete 12 months of offense reports. Offense counts listed in Table 24, pg. 96 are based on actual reported offenses and not estimation.

Information Grouping

The crime statistics reported by an individual agency indicate what is happening in one particular area, but to make rational comparisons among a number of jurisdictions, communities with similar characteristics need to be grouped together. It may be important to know how a city compares with cities of similar size, or how patterns of crime differ in various types of communities. Grouping agencies with similar characteristics allows these determinations to be made. Aside from being merely interesting, such comparative analysis provides the basic information for long-range criminal justice planning.

UCR groups jurisdictions on the basis of population size and community type, both of which are necessary to view a jurisdiction in proper perspective. Grouping by population size considers only the population of the relevant area. It does not consider proximity to a major metropolitan area in spite of the fact that widely different crime patterns could be expected in a city of 20,000 which is a suburb of Cleveland or Cincinnati and one which is in a rural area. Grouping by community type does take into account the urban/rural character of the area, and includes a wider range of populations in each category. For use in interpreting this report, the UCR grouping systems are listed below.

Population Groupings

The population figures for cities and counties in Ohio used for this publication were provided by the Bureau of Census. They represent the final population counts as of April 1, 1980 and were released by the Bureau of Census in April, 1981.

The following is the breakdown of city and county populations into groupings by size and county type. These groupings are utilized in presenting various tables throughout this publication.

Cities

Group	Population
1	Over 250,000
2	100,000 to 250,000
3	50,000 to 100,000
4	25,000 to 50,000
5	10,000 to 25,000
6	2,500 to 10,000
7	Under 2,500

Counties

Group	Population
8	(Rural) Outside a Standard Metropolitan Statistical Area (SMSA)
9	(Suburban) Inside a Standard Metropolitan Statistical Area (SMSA)

Community Types

One method of analyzing the statistics submitted into the UCR program is to consider the proximity of a jurisdiction to metropolitan areas.

A Standard Metropolitan Statistical Area (SMSA), generally, is made up of a core city or cities with a combined population of 50,000 or more and the surrounding county or counties which share certain metropolitan characteristics. These "surrounding counties" are socially and economically integrated with the central county, which means that at least 15% of the workers living in the adjacent county work in the central county, or at least 25% of those working in the adjacent county live in the central county. For an area to have a "metropolitan character", at least 75% of the labor force is engaged in nonagricultural work.

A suburban city or county refers to any city or county that is within an SMSA. A rural city or county is made up of the unincorporated portions of counties outside urban places and SMSAs.

Crime Index

The crime index is a basic measure of crime which can be used for comparing the extent of crime among cities, counties and states of similar size. The index is simply the total number of certain offenses that occur in a given area in one calendar year. These offenses are murder and nonnegligent manslaughter, rape, robbery, aggravated assault, burglary, larceny and motor vehicle theft—all of the Part I offenses except negligent manslaughter.

These offenses were selected as indicators of the total amount of criminal activity because they are serious offenses that are the focus of widespread concern; they occur with sufficient frequency to reflect fluctuations in the overall level of criminal activity; they are most likely to be reported, and reported accurately, to law enforcement officers due to their seriousness; and, they are offenses that can be clearly and specifically defined.

Although a hierarchy principle is built into scoring index crimes, the varying severity of offenses is not taken into account in considering the total index, resulting in equal importance being given to shoplifting and rape in this total. Furthermore, the actual incidence of crime in a city may not be accurately depicted by the index if the majority of the city's crime involves nonindex offenses such as vandalism or narcotics.

The United States Congress, in October of 1978, passed legislation mandating that the crime of arson be reclassified as a Part I crime index offense in the UCR program. Ohio law enforcement agencies report available information on the crime of arson directly to the national FBI/UCR program.

Crime Rate

The crime rate is based on the crime index, but adjusts the index for variances in population by indicating the number of index offenses for each 100,000 persons. This means that comparisons may be made among several areas with different populations, or within one area with different populations over a period of time, without the information being biased by population differences[1]. For most general comparisons, the crime rate is probably the most accurate figure to use. A degree of caution should be exercised, however, in making comparisons between the figures in this book and statistics in prior ***Crime in Ohio*** publications. Changes in the levels of crime from year to year may be due to many variables, such as improved reporting or record-keeping procedures, redefinition of reporting areas, or increased participation in the program.

To calculate the crime rate, first divide the population of the area by 100,000, and then divide the number of index offenses by that answer. For example, if a city has a population of 273,456 and a crime index total of 21,257, the calculations would be:

1) 273,456 divided by 100,000 = 2.73456
2) 21,257 divided by 2.73456 = 7773.5

Thus, although the city's crime index is 21,257, its crime rate is 7773.5(the number of crimes for each 100,000 people).

For the same city a crime rate for each of the seven index crimes can be calculated. For example, 6,400 robberies were reported in this city of 273,456 population:

1) 273,456 divided by 100,000 = 2.73456
2) 6,400 divided by 2.73456 = 2340.4

The robbery crime rate is 2340.4 per 100,000 population.

The calculations are the same for a city with fewer than 100,000 inhabitants. A city has 45,321 population and a crime index of 1,588:

1) 45,321 divided by 100,000 = .45321
2) 1,588 divided by .45321 = 3503.9

The crime rate is higher than the index because it indicates the number of offenses that would have occurred if the city had 100,000 inhabitants.

Definitions

Part I Offenses

Violent Crimes

Criminal Homicide:

a. **The Murder and Nonnegligent Manslaughter** category, as defined in the Uniform Crime Reporting Program, is the willful (nonnegligent) killing of one human being by another. The classification of this offense, as in all other crime index offenses, is based solely on police investigation as opposed to the determination of a court, medical examiner, coroner, jury, or other judicial body. Not included in the count for this offense classification are deaths caused by negligence, suicide, or accident; justifiable homicides, which are the killings of felons by law enforcement officers in the line of duty or by private citizens; and attempts to murder or assaults to murder, which are scored as aggravated assaults.

b. **Negligent Manslaughter** is the killing of one person through the gross negligence of another.

Rape, as defined in the Program, is the carnal knowledge of a female forcibly and against her will. Assaults or attempts to commit forcible rape by force or threat of force are also included; however, statutory rape (without force) and other sex offenses are not included in this category.

Robbery is the taking or attempting to take anything of value from the care, custody, or control of a person or persons by force or threat of force or violence and/or by putting the victim in fear. The robbery category includes assault to rob, strong-armed robbery and armed robbery.

Aggravated Assault is an unlawful attack by one person upon another for the purpose of inflicting severe or aggravated bodily injury. This type of assault is usually accompanied by the use of a weapon or by means likely to produce death or great bodily harm. Attempts are included since it is not necessary that an injury result when a gun, knife, or other weapon is used which could and probably would result in serious personal injury if the crime were successfully completed. Attacks using personal weapons (part of the attacker's body) must result in serious personal injury to be classified as aggravated assault.

Property Crimes

Burglary is defined as the unlawful entry of a structure to commit a felony or theft. The use of force to gain entry is not required to classify an offense as burglary. Burglary is categorized into three subclassifications. forcible entry, unlawful entry where no force is used, and attempted forcible entry.

Larceny is the unlawful taking, carrying, leading, or riding away of property from the possession or constructive possession of another. It includes crimes such as shoplifting, pocket-picking, purse-snatching, thefts from motor vehicles, thefts of motor vehicle parts and accessories, bicycle thefts, etc., in which no use of force, violence, or fraud occurs. In the Uniform Crime Reporting Program, this crime category does not include embezzlement, "con" games, forgery, and worthless checks. Motor vehicle theft is also excluded from this category for crime reporting purposes inasmuch as it is a separate crime index offense.

Motor Vehicle Theft is defined as the theft or attempted theft of a motor vehicle. This definition excludes the taking of a motor vehicle for temporary use by those persons having lawful access. The theft of motor boats, construction equipment, airplanes and farming equipment are considered larceny.

Arson is defined as the willful or malicious burning of property with or without the intent to defraud. This category includes attempted arson.

Part II Offenses

Other Assault is an unlawful attack or attempted attack on another person which does not result in serious injury to the victim and which does not involve the use of a dangerous weapon.

Forgery and Counterfeiting involves the making, altering, using or possession, with intent to defraud, anything false which is made to appear true. Attempts are included.

Fraud is defined as fraudulent conversion, and obtaining money or property by fraudulent means. Included are confidence games, larceny by bailee, and bad checks (except forged or counterfeit checks).

Embezzlement is misappropriation or misapplication of money or property entrusted to one's care, custody or control.

Definitions

Part II Offenses (continued)

Stolen Property Offenses involve the buying, receiving and possessing of stolen property, or the attempts to do so.

Vandalism is the willful or malicious destruction, injury, disfigurement or defacement of real or personal property without the consent of the owner or person having custody or control.

Weapons Offenses include all violations of regulations or statutes that control carrying, using, possessing, furnishing and manufacturing deadly weapons or silencers. Attempts are included.

Prostitution and Commercialized Vice consist of sex offenses and attempted sex offenses of a commercialized nature.

Sex Offenses include all offenses against common decency and morals. This category includes statutory rape and all other sex offenses or attempted sex offenses not previously defined.

Drug Law offenses consist of the unlawful possession, sale, use, growth or manufacture of controlled substances.

Gambling violations involve promoting, permitting or engaging in illegal gambling.

Offenses Against the Family and Children include the nonsupport, neglect, desertion or abuse of family and children.

Driving Under the Influence involves the operation of any motor vehicle or common carrier while under the influence of liquor or drugs.

Liquor Law violations are those violations of state or local regulatory liquor laws. They include sale to minors and drinking on a public conveyance. Excluded in this category are driving under the influence and drunkenness.

Drunkenness includes all offenses of intoxication except driving under the influence.

Disorderly Conduct consists of breaching the peace or attempting to do so.

Vagrancy violations include offenses such as begging and loitering (age 18 and over).

All Other Offenses refer to all violations of state or local laws except traffic violations and offenses defined above.

Suspicion involves an arrest for no specific offense and release without formal charges being filed. (Not an offense)

Curfew and Loitering Laws refers to juvenile violations of local curfew and loitering ordinances.

Runaway violations involve the unlawful truancy from a legal place of residence by a juvenile.

Other Definitions

Reported Crime refers to the number of crimes reported to BCI. These figures do not represent the total number of crimes that have occurred in Ohio during 1981. Actual crime figures are higher than the reported UCR crime figures because: not all crimes are reported by the victims, not all law enforcement agencies in Ohio contribute to the voluntary UCR Program, and of those agencies that did contribute, seventy did not submit a full twelve months of crime statistics.

Estimated Crime refers to the effort made in this publication to present a picture of what the crime rate and number of crimes may have been in 1981. FBI/UCR took statistics from agencies in Ohio that contributed less than twelve months but more than three and estimated the full twelve months crime statistics for those agencies. These estimates were added to the reported crime figures and a total estimate for Ohio was derived (see Table 24, pg. 126-27). The state-wide estimated crime may be lower than the actual amount of crime in Ohio because of the crimes not reported to law enforcement agencies. In addition, crimes could not be estimated for agencies that did not contribute to UCR or contributed less than four months.

Reported Value refers to the value of items stolen which is reported to BCI. The value of items stolen is not always reported to UCR, thus the values presented in this publication may be lower than the actual monetary loss in 1981. The reason for this incomplete statistic is the same as for reported crime above.

Section 2

Officers Assaulted and Killed

Officers Assaulted and Killed

Ohio suffered the loss of two law enforcement officers through felonious acts in 1981. Two officers were killed by felonious acts in 1980.

One officer lost his life by accidental means in 1981.

Assaults on officers during 1981 decreased 7.1% from 1980; the number of officers assaulted in 1981 was 3,329 compared to 3,582 assaulted in 1980.

Officer assaults occurred at a rate of 20.8 for every 100 officers. Thirty-four per cent of these assaults involved officer injuries.

Three specific situations accounted for the majority of officer assaults. Responding to traffic situations remained the most frequent activity in which officers were assaulted (28.4%), followed by answering disturbance calls (20.0%), and the transporting of prisoners (13.5%). The traffic assault total includes the Ohio State Highway Patrol which had 701 officers assaulted. This agency's figure alone represents 75.0% of the traffic related officer assaults reported.

Personal weapons such as hands, fists, and feet were used in 87.1% of all officer assaults, and were responsible for 88.7% of all officer injuries. Other dangerous weapons followed, accounting for 6.2% of all assaults and 7.7% of all injuries sustained. Firearms were encountered in 4.9% of the total assaults and were responsible for 2.2% of all officer injuries.

Officers assigned to one-man vehicles again sustained the largest number of assaults, 1,748 (53.1%). One-man units without assistance from fellow officers sustained 34.9% of all assaults; one-man units with assistance from another officer accounted for 18.2% of all assaults. Two-man vehicles were involved in 31.0% of all officer assaults.

The night hours of 10:00 p.m. to 4:00 a.m. reflected the highest rate of assaults (52.0%). The lowest rate of 7.0% occurred between 6:00 a.m. and 12 noon.

Approximately ninety-six per cent of the officer assaults were cleared.

August reflected the greatest number of officers assaulted per month; February had the lowest number. However, the largest rate of increase for any one month in the number of officers assaulted was January, 1981, in which assaults jumped from 254 in 1980 to 289 (13.8% increase) in 1981.

    1 every 3 minutes
  - **LARCENY-THEFT**
    1 every 2 minutes
  - **MOTOR VEHICLE THEFT**
    1 every 12 minutes

The Crime Clock should be viewed with care. Being the most aggregate representation of UCR data, it is designed to convey the annual reported crime experience by showing the relative frequency of occurrence of the index offenses. This mode of display should not be taken to imply a regularity in the commission of the Part I Offenses; rather, it represents the annual ratio of crime to fixed time intervals.

Section 3

Ohio Index Crime

Introduction

The information contained in the publication of *Crime in Ohio 1981* is presented in two parts: 1) an overview of index crime in Ohio for the year, and 2) individual reports for murder and nonnegligent manslaughter, rape, robbery, aggravated assault, burglary, larceny, motor vehicle theft, and stolen property. The overview provides a summary of Ohio index offenses in 1981, followed by individual offense reports utilizing charts and graphs to include more detail. In addition to the number of index offenses, stolen property is described, listing average losses for each type of offense and monthly loss by type of item stolen. The number of index offenses reported to law enforcement officers is the basic measure of yearly fluctuations and long-term trends in criminal activity. It is important to note that not all index offenses are reported to law enforcement agencies and the only victimization information included is in reference to murder offenses. Furthermore, since UCR is a voluntary program, not all law enforcement agencies report crime statistics.

The tables, graphs, and charts contained in this report reflect the actual number of reported offenses submitted by 457 law enforcement agencies participating in the Ohio UCR Program. Populations covered by these submitting agencies will give a more representative picture of crime in Ohio. Approximately 94.3% of the state population is covered in the reports. Many of the townships and smaller agencies submit through their county sherriff's office. The reported crime rates presented are based only on Ohio law enforcement agency statistics reported to UCR for the full twelve months of 1981. The actual crime figures reported by individual agencies are presented in Table 24, pages 96-127.

Ohio Overview

The reported crime index in 1981 was 551,471, a decrease of 0.9% from 1980. Detailed information was not provided for 43,167 of these offenses. The violent crimes of murder, rape, robbery, and aggravated assault numbered 51,112, or 9.3% of the total index. The remaining 90.7% or 500,359 crimes were the property offenses of burglary, larceny and motor vehicle theft for 1981. Violent crime decreased 1.0% from 1980 and property crime decreased 0.9%. The offense which showed the greatest percentage of decrease since 1980 was rape, which declined 10.2% in 1981. All of the index crime categories experienced a decrease in 1981 from 1980, with the exception of robbery which reflected an increase of 5.5% over 1980.

The FBI/UCR annually prepares an estimate of index crime counts and crime rates for each state, projecting in their calculations what crime would be for the total state population (including both reporting agencies and predictions for nonreporting agencies—See Table 17). In 1981, these FBI estimated crime rates indicated that index crime decreased 4.4% from a 1980 estimate of 5432.2 index crimes per 100,000 people to a 1981 estimate of 5191.3 offenses per 100,000.

The reported crime rates calculated by BCI are based on the reports of all 12 month contributors (representing approximately 94.3% of the estimated state population). The BCI crime rate for the total index increased 0.5% from 5751.2 crimes per 100,000 people in 1980 to 5781.3 in 1981.

In 1981 there was a total of 342,714 arrests for Part I and Part II crimes, a 4.4% decrease from 1980. Adult arrests accounted for 78.4% of these arrests, and juveniles the remaining 21.6%. The determining sex and race breakdown of those arrested, 82.6% were male arrests and 17.4% female. Seventy-four and one tenth percent of the reported arrests were white, followed by 24.0% black, and all other races 1.9%. No race information was submitted for 5,944 arrests, or 1.7% of the total arrests reported.

The following are the four most frequent groups of individuals reportedly arrested in 1981 by their age and race:

White/18 years and older	196,874 arrests or 57.5%
White/under 18 years	57,212 arrests or 16.7%
Black/18 years and older	66,940 arrests or 19.5%
Black/under 18 years	15,365 arrests or 4.5%

The index offenses which were cleared (solved) in 1981 number 107,757, an increase of 0.4% from 1980.

Of the 1981 reported index offenses, 15.0% were cleared by the arrest of at least one adult offender and juveniles accounted for the remaining 4.5% of the cases cleared. Table 23, pages 94-95, reflects that 72.0% of the murders reported in 1981 were cleared. At the other extreme, only 13.9% of the reported burglaries were cleared. These percentages should be viewed with discretion, because the clearance information reported for 1981 does not necessarily correspond with those offenses reported for the year. An agency may report a case cleared in 1981 which was initially reported as an offense in a prior year and was solved in 1981.

The number of clearances reported in Table 23 will not correspond to the number of arrests reported in Table 18 and 19. Clearance information deals with the number of cases cleared or solved and is only reported on the top seven index crimes. Arrest information, on the other hand, is based on the number of individuals arrested and includes all twenty-seven (juvenile twenty-nine) Part I and Part II crime categories.

Murder

DEFINITION

The murder and nonnegligent manslaughter category, as defined in the Uniform Crime Reporting Program, is the willful (nonnegligent) killing of one human being by another. Excluded are attempts to kill, assaults to kill, suicides, accidental deaths, and justifiable homicides.

Murder, the highest of the index offenses, decreased 9.4% in 1981 from the previous year. Seven hundred and seventy-three individuals were murdered in Ohio in 1981. These murders represented 1.5% of all violent crimes (murder, rape, robbery, aggravated assault) reported but remained less than 0.15% of the total index.

The reported crime rate for murder decreased from 8.9 murders per 100,000 people across Ohio in 1980 to 8.2 murders in 1981.

The major population center of Cleveland accounted for the highest number of murders throughout the state, reporting 251 or 32.5% of all murders in 1981.

Murder is the only index crime in which detailed information is collected concerning victims, offenders, weapon used, and circumstances under which the offense took place. For 14 of the 773 murders reported in 1981 (1.8%), no detailed information was reported. Of the remaining 759 cases in which some form of detailed information was reported, adults 18 years and older accounted for 91% of the victims. Of the 759 detailed murders reported, 66.4% were committed by adults.

Males were reported as both the most frequent victims and offenders in murder cases, falling as victims in 74.8% of the detailed murders and comprising 57.8% of all reported offenders. White victims were reported in 49.8% of the detailed murders, followed by black victims in 49.4% of these cases. These same two racial groups were reported as the most frequent murder offenders, with 39.7% of the 759 offenders being reported as black and 31.4% as white.

Weapons most frequently used in murder offenses were handguns, used in 53.8% of the detailed murders. Second were knife inflicted (or cutting instruments) deaths, reported in 14.5% of the murders.

The graph of murder by weapon on page 32 displays additional categories for 1981 not included in previous years. These new categories of explosives, narcotics, and strangulation were reported in 22 cases and accounted for 2.9% of the total murders committed.

The relationship between victims and offenders is also gathered for murder. "Unknown relationship" was the single most frequent relationship reported, accounting for 28.1% of all murders committed. Family relationships existed between victims and offenders in 18.8% of the total murders, with 36 wives being the most frequent family members murdered.

The situation most commonly reported in murder offenses was that in which there was a single victim, single offender (63.9% of the total murders).

A comparison of murder clearances rates shows that, as in 1980, the percent of murder offenses cleared was higher than the rate for any other index crime. However, the murder clearance rate fell from 76.7% in 1980 to 72.0% of total murders cleared in 1981.

The number of arrests made for murder offenses in 1981 numbered 716, decreasing 108 from 1980.

Rape

DEFINITION

Forcible rape, as defined in the Program, is the carnal knowledge of a female forcibly and against her will. Assaults or attempts to commit forcible rape by force or threat of force are also included; however, statutory rape (without force) and other sex offenses are not included in this category.

The index offense which is ranked second in seriousness in the UCR hierarchy is the crime of rape. In 1981, law enforcement agencies throughout the state became aware of and reported 3,205 rapes, a decrease of 10.2% from those reported in 1980. This total represents 6.3% of the violent crime and 0.6% of the total index reported in 1981. The rape category includes both forcible rape as well as attempts, but is very specific in definition and does not include other sex offenses, such as those involving male victims. Forcible rapes accounted for 81.2% of all those reported, and the remaining 18.8% were attempts.

The month of August was the highest in total reported rapes. It also had the highest total for forcible committed.

The month of February, 1981, reflected the largest percent of increase in rapes for any single month compared to the same month last year, rising 8.6% from 220 in 1980 to 239 in 1981.

The reported crime rate for rape state-wide was 34.0 rapes per 100,000 people, a decrease from 37.1 in 1980.

Percentage of clearance for reported rapes was 56.6%.

Arrests in 1981 for rape numbered 1,286, an increase of 38 from 1980.

Adults accounted for the majority of these arrests, 79.2% (1,019).

Robbery

DEFINITION

Robbery is the taking or attempting to take anything of value from the care, custody, or control of a person or persons by force or threat of force or violence and/or by putting the victim in fear.

Robbery is categorized as the third most serious violent crime in the reporting index. In 1981, there were 24,867 robberies reported in the State of Ohio. This total represents a 5.5% increase over robberies committed state-wide in 1980. These robbery offenses account for 48.7% of all violent crimes reported, and 4.5% of the total index.

Of the 24,867 robberies in 1981, detailed information was not submitted for 1,487 or 6.0%. For the remaining 23, 380 robbery offenses in which detailed information was provided, a value of $10.35 million was estimated in stolen property. This figure was 4.8% more than the $9.88 million reported in 1980. The highest robbery loss ($4,905,482) occurred on highways, streets, alleys, and sidewalks. The largest increase in stolen property values for the year occurred for robberies in commercial businesses (17.3%). Service stations and banks showed the highest decrease in dollar amounts; they were down 35.1% and 27.0% respectively.

Bank robberies lead in dollar loss per offense, but remain the location where fewest robberies occur (see Table 8). The number of bank robberies decreased in 1981 as did dollar loss of property.

The month of January, 1981, had the highest number of robberies (2,449) for any single month, with a 32.4% increase. January of 1981 also was the month noted for the largest change in the number of robberies from the previous year, jumping 32.4% from 1,649 offenses in 1980 to 2,449 for the month in 1981.

The weapons most frequently used in robbery offenses were firearms, which were used in 42.8% of the crimes. Strong-arm robberies followed in 42.6% of the offenses.

The state-wide crime rates for robberies in 1981 increased to 266.4 robberies per 100,000 from 247.1 per 100,000 population in 1980.

The clearance rate for robbery offenses increased by 0.2% in 1981, from 27.2% of reported robberies solved in 1980 to 27.4% in 1981. The actual percentage of robbery clearances reported in 1981 remained much the same as comparable figures in 1980. Adult clearances continued to surpass juvenile clearances at a rate of about five to one. The clearances of robberies involving adults increased from 22.9% to 23.7% of the reported offenses, while those cases cleared which involved only juveniles dropped from 4.3% to 3.7% of all reported robberies.

Total arrest for robbery offenses in 1981 numbered 4,973, a decrease of 113 (2.2%) over 1980.

Aggravated Assault

DEFINITION

Aggravated assault is an unlawful attack by one person upon another for the purpose of inflicting severe or aggravated bodily injury. This type of assault is usually accompanied by the use of a weapon or by means likely to produce death or great bodily harm. Attempts are included since it is not necessary that an injury result when a gun, knife, or other weapon is used which could and probably would result in serious personal injury if the crime were successfully completed.

Aggravated assault is ranked fourth on the index crime hierarchy, and is the final category of violent crime to be presented in this report.

Total assaults in Ohio, including both simple and aggravated, numbered 76,016 in 1981. This represented a 2.4% decrease over the total reported in 1980. Of these total assaults, aggravated offenses fell 5.7% from 23,613 assaults in 1980 to 22,267 in 1981. The simple assaults fell 1.0% from 54,292 to 53,749 in 1981. Simple assaults accounted for 70.7% of all assaults committed in 1981, and aggravated assaults were indicated in the remaining 29.3% reported.

aggravated assaults in that simple assaults do not involve the use of a dangerous weapon and do not result in serious injury. Simple assaults are excluded and only the more serious crime of aggravated assault is included in the UCR crime index. Aggravated assaults in 1981 represented 43.6% of violent crime and 4.0% of all reported index crime.

The largest number of aggravated assaults for one month occurred during August, 1981, and numbered 2,141. This month accounted for the highest monthly figures reported in two out of four of the weapons categories, with 520 firearm assaults and 500 assaults with other dangerous weapons.

The weapons most frequently used in aggravated assaults were personal weapons (hands, fists, and feet) in 36.7% of the cases, followed by firearms (22.5%), other dangerous weapons (21.1%), and cutting instruments (19.7%). The month of March, 1981, had the largest increase in the number of aggravated assaults as compared to the same month last year, increasing 10.3% from 1,713 to 1,889 in 1981. During the same time period, July decreased by 25.2% from 2,759 offenses in 1980 to 2,063 offenses in 1981.

The crime rate for aggravated assault decreased state-wide from 242.1 in 1980 to 231.9 aggravated assaults per 100,000 persons in 1981. The largest increase in the number of offenses per 100,000 people occurred in rural populations of 25,000-50,000, which experienced a 32.5% increase rural, while populations of under 2,500 reflected a decrease of 21.4% assaults offenses per 100,000. It should be noted that in determining crime rates, calculations are made per 100,000 population. In areas with fewer inhabitants than 100,000, as noted above, the crime rate estimates the number of offenses that would have occurred if the area had 100,000 inhabitants.

The aggravated assault clearance rate in 1981 remained much the same as in 1980, decreasing 1.3% to become 60.6% of reported assault offenses cleared. Adults were involved in the clearance of 54.4% of the assaults reported in 1981, and juveniles were involved in the remaining clearance of 6.2% of the reported aggravated assaults. For the year of 1981, the number of arrests for aggravated assault decreased by 460, from 6,075 arrests in 1980 to 5,615 in 1981.

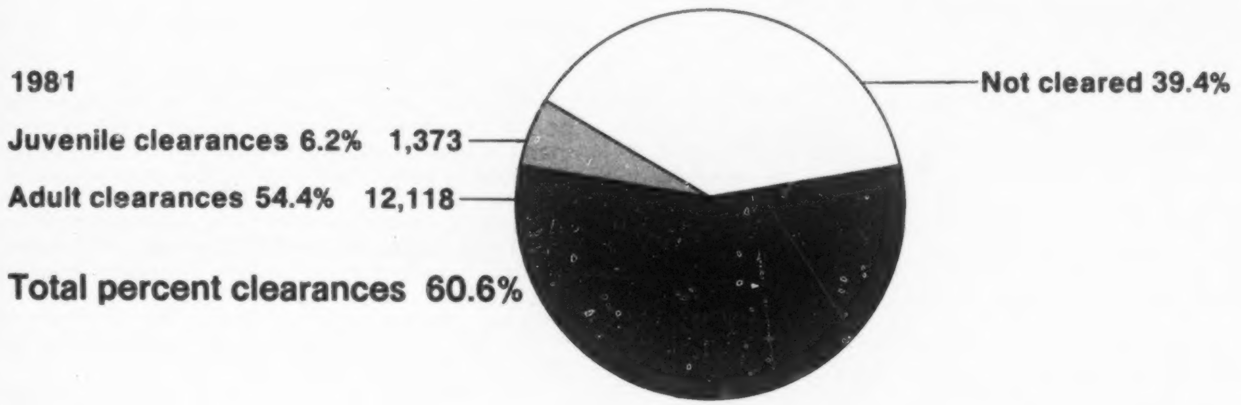
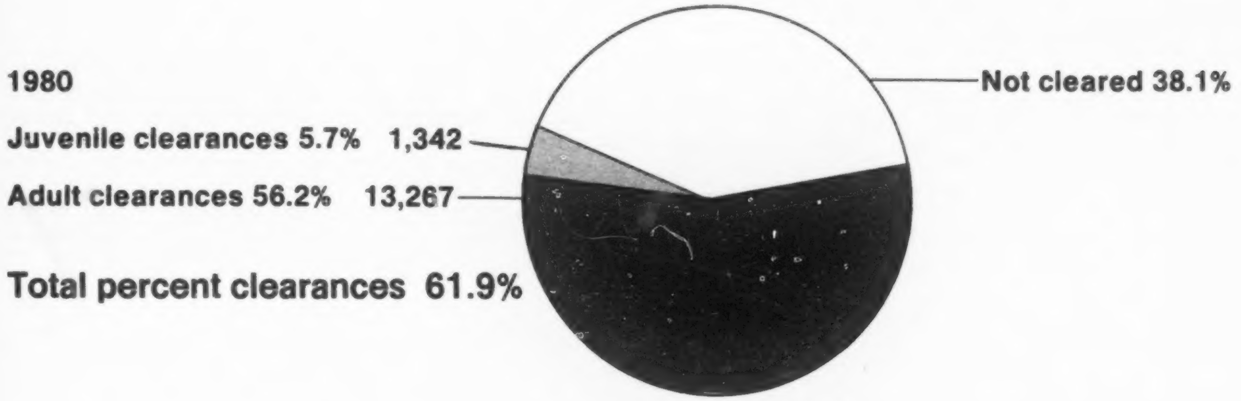
Aggravated Assault Clearance Rates: 1981 & 1980





Burglary

DEFINITION

The Uniform Crime Reporting Program defines burglary as the unlawful entry of a structure to commit a felony or theft. The use of force to gain entry is not required to classify an offense as burglary. Burglary in this Program is categorized into three subclassifications: forcible entry, unlawful entry where no force is used, and attempted forcible entry.

Burglary is ranked as the fifth crime in the UCR index, and is the first of the property crimes to be presented in this report. Total burglaries in Ohio in 1981 numbered 151,400, an increase of 0.6% since 1980. This figure represents 30.3% of all reported property crimes and 27.5% of all index crimes.

The first five months of 1981 reflected an increase in burglaries over the same comparable months in 1980, while the last seven months reflected decreases. The greatest number of burglaries occurred in July (13,593), while the fewest were reported in December (11,994). The month which showed the greatest percent of increase over the same month last year was February 1981, in which burglaries jumped 17.2%.

Forcible entry burglaries accounted for 76.9% of all burglaries reported, followed by 15.9% in which no force was used, and the remaining 7.2% in which only attempts were made to burglarize. July had the highest burglary total for any single month, while January took the lead in the number of forcible entry burglaries reported during the year.

Of the total 151,400 burglaries in 1981, detailed information was not submitted in 13,897 offenses or 9.2%. Of the remaining 137,503 offenses in which additional information was provided, residential burglaries accounted for 68.1% of the total, a slight increase of 0.9% since 1980. Of the 93,638 residential burglaries in which detailed information was provided, 42.5% occurred at night. In the 43,865 detailed non-residential burglaries reported, an even higher percentage occurred at night (62.4%).

A value loss of $87 million was reported for stolen property in 1981 resulting from the 137,503 total detailed burglaries. This figure is $1 million more than the total stolen property value from burglaries reported in 1980. ($86 million). It should be noted, however, that this small value increase in 1981 may be due to the submission of detailed information on 4,930 less burglaries in 1981 than were submitted in 1980. The largest dollar loss from burglaries in 1981 resulted from residential burglaries, and in particular, those residential burglaries occurring at night. The average dollar loss per burglary offense rose from $606 in 1980 to $634 in 1981.

The state-wide crime rate for burglaries per 100,000 people rose from 1554.7 burglaries in 1980, to 1585.4 burglaries per 100,000 in 1981. The largest decrease in the burglary rate per 100,000 noted in 1981 was for rural populations of under 2,500 people. It decreased by 110.0 offenses per 100,000 or 15.9%. The greatest rise in crime rates for burglary occurred in rural populations of 10,000-25,000 people, increasing 12.3% from 1107.7 burglaries per 100,000 persons in 1980 to 1244.3 burglaries in 1981.

Burglaries in 1981 were cleared in 13.9% of those offenses reported, a decrease of 0.3% since 1980. The clearances of burglaries involving adult offenders comprised 9.9% of the burglaries cleared, and clearances involving only juveniles made up the remaining 4.0%.

Burglary arrests in 1981 number 16,131, which was 57 less than arrests reported for burglary in 1980.

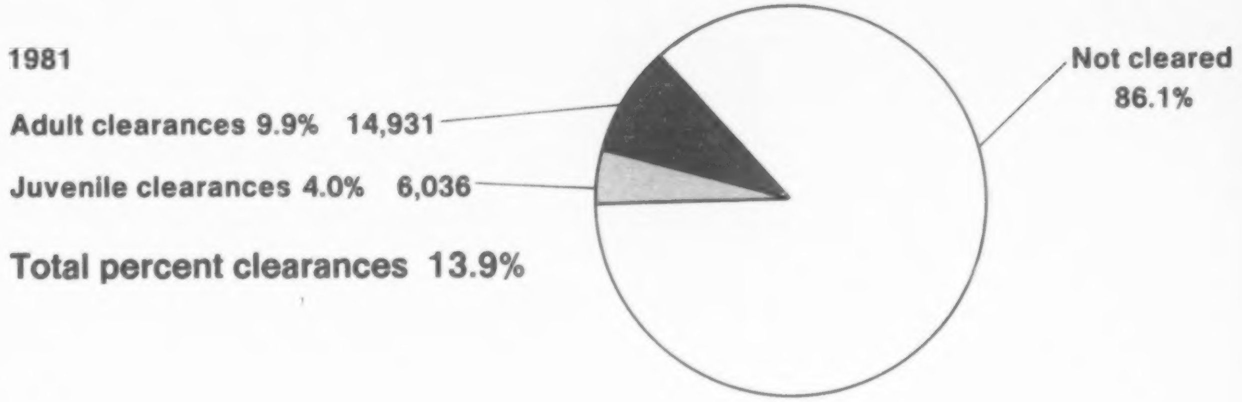
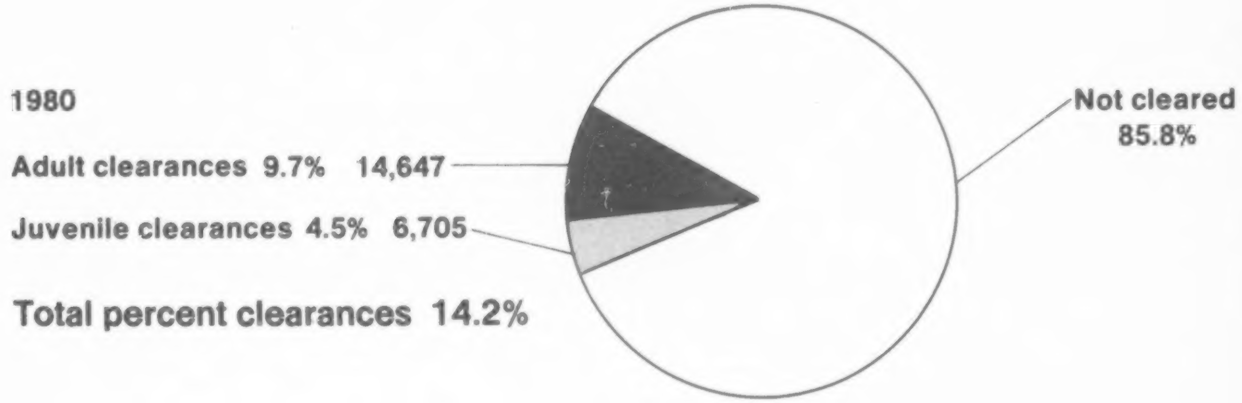
Burglary Clearance Rates: 1981 & 1980





Larceny

DEFINITION

Larceny-theft is the unlawful taking, carrying, leading, or riding away of property from the possession or constructive possession of another. It includes crimes such as shoplifting, pocket-picking, purse-snatching, thefts from motor vehicles, thefts of motor vehicle parts and accessories, bicycle thefts, etc., in which no use of force, violence, or fraud occurs. In the Uniform Crime Reporting Program, this crime category does not include embezzlement, "con" games, forgery, and worthless checks.

Larceny, which remains the largest component of the index crimes, is ranked as the sixth offense in the UCR hierarchy. The number of larcenies reported in 1981 was 305,300, a 1.5% decrease over larcenies reported in 1980. The 1981 larceny total accounted for 61.0% of all property crime and 55.4% of all index crime.

Detailed information was not submitted on 9.1% or 27,769 larcenies. For the remaining 277,531 larcenies for which detailed information was submitted, the most frequent type of larceny was the theft of motor vehicle parts, which accounted for 25.2% of the detailed larceny offenses reported. This type of offense, along with thefts from motor vehicles, accounted for 39.7% of all larceny offenses. Pickpocketing and purse snatching larcenies were the least frequented types of larcenies reported, as well as representing the lowest property losses of all nine types of larcenies in Table 13.

July of 1981 reflected the greatest number of larceny offenses (29,260) in any one month, while January had the fewest (21,312). March gained the largest number of offenses, increasing 10.4% from 23,031 offenses in 1980 to 25,425 in 1981.

In evaluating dollar losses resulting from larceny offenses, a decrease of seven hundred thousand or 1.0% was reported in 1981. Although the greatest number of larceny offenses (104,393) involved property valued at less than $50, the greatest property loss ($57 million, or 82.0%) occurred in larcenies of property over $200.

Larcenies from buildings, as well as being one of the most frequent types of larcenies, held the highest average dollar loss per offense ($402/offense). Thefts from buildings also reflected the largest property loss of any other single type of larceny ($19.5 million, or 28.0%) in 1981.

The larceny dollar loss of 69.7 million in 1981 accounted for 21.7% of the total $321 million lost in all index offenses reported in 1981.

The state-wide crime rate for larceny decreased 0.2%, from 3201.5 offenses per 100,000 people in 1980 to 3194.4 larcenies in 1981. The greatest crime rate changes in 1981 took place in populations of under 2,500 in which the suburban larceny crime increased by 77.9% while the rural crime rate in population 2,500—10,000 decreased 4.1% since 1980.

The state-wide larceny clearance rate increased 0.9% in 1981. Of the 18.8% of larcenies that were solved in 1981, 13.9% involved adults, while the remaining 4.9% of larcenies cleared involved juveniles only.

Arrests for larcenies in 1981 number 44,712, an increase of 2.6% from 1980.

Motor Vehicle Theft

DEFINITION

Motor vehicle theft is defined as the theft or attempted theft of a motor vehicle. This definition excludes the taking of a motor vehicle for temporary use by those persons having lawful access. Also excluded are thefts of motor boats, construction equipment, airplanes, and farming equipment.

Motor vehicle theft is considered a special type of larceny which, because of the frequency with which it occurs, is considered a separate index crime. This offense falls seventh in the crime hierarchy. The number of motor vehicle thefts reported in 1981 fell 1.4% from 44,259 in 1980 to 43,659 in 1981. Thefts of vehicles accounted for 8.7% of all property crime and 8.1% of the total index crime.

The month of January had the largest number of motor vehicle thefts reported (4,007), while the fewest thefts were reported in February (3,406). The largest increase for any one month compared to the same month of the previous year appeared in January with a 15.3% increase in thefts.

Of those motor vehicle stolen in 1981, 68.0% or 29,698 vehicles were recovered, a decrease of 5.3% from the 73.3% recovered in 1980.

Thefts of automobiles accounted for 80.9% of all motor vehicle thefts. Thefts of trucks and buses were involved in 10.7% of all vehicle offenses reported, and other vehicles such as motorcycles, scooters, mopeds, and snowmobiles comprised the remaining 8.4%

In the 43,659 motor vehicle thefts reported in 1981, a dollar loss of $154,705,828 was estimated. For the 29,698 vehicles recovered, a total of $87,955,648 was reported as the dollar value recovered. It should be stressed that the recovered amount which is listed reflects the value of vehicles in the condition in which they were recovered, including deductions for damage or missing parts. This would partially explain why the recovered values appear to be much lower than the stolen values of motor vehicle thefts.

The state-wide crime rate for motor vehicle theft per 100,000 population rose from 460.1 offenses in 1980 to 461.1 in 1981. In individual population groups, the greatest increase in crime rate for motor vehicle theft per 100,000 people occurred in suburban populations under 2,500, from 247.2 (96) in 1980 to 1242.5 (514) in 1981. The greatest decrease in crime rate for motor vehcile thefts per 100,000 people occurred in rural populations 2,500-10,000, a decrease of 30.4%.

Motor vehicle theft clearances increased by 0.2% from 15.4% in 1980 to 15.6% motor vehicle thefts solved in 1981. Offenses involving adults comprised 12.1% of the vehicle thefts which were cleared, and the remaining 3.5% of the cases cleared involved only juveniles.

A total of 3,215 persons were arrested for motor vehicle theft in 1981. This is 146 fewer arrests than the 3,361 reported in 1980.

Reported Value of Property Stolen and Recovered

Property valued at $319 million was reported stolen state-wide in 1981. Property was reportedly recovered at a value of $104 million, or 32.7% of the value of stolen goods.

The highest dollar amount of stolen property was once again in the motor vehicle theft category, accounting for 48.5% of the total property value stolen in 1981. Motor vehicle theft also reflected the highest value of property recovered, 84.0% of all property recovered. The lowest stolen and recovered property amounts were reported in the livestock category.

The value of stolen property decreased from 1980 in the following categories: office equipment, firearms, household goods, consumables, livestock and currency. December of 1981 was the month reflecting the largest value of stolen property and March was estimated to have the largest value in property recovered.

The lowest value of stolen and recovered property was reported in September. February 1981, sustained the largest increase in both the value of property stolen and recovered since 1980, jumping 22.2% in the stolen property value and 27.2% in recovered property.

The value of stolen property, listed by category in Table 16, reflects the property loss resulting from the four index crimes of: motor vehicle theft $154.7 million, burglary $87.1 million, larceny $69.7 million, and robbery $10.4 million. An additional $153 thousand in property was stolen when the offenses of murder and rape were committed.

Caution should be used in making any comparisons between the value of property stolen and that recovered. Recovered property value indicates the value of the property at the time it is recovered whether it is damaged or in its original condition. From the figures available, there is no way to determine the original value of stolen property which has been cleared by recovery.

Section 4

Tables

Table 17
Ohio Estimated Crime Index: 1968-1981[11]

The Ohio Uniform Crime Reporting (UCR) Program is a voluntary program, therefore not every law enforcement agency in Ohio participates. In 1981, there was a total of 457 agencies who participated. Of these contributors, 70 of the agencies did not contribute a complete year's data. For this reason, (see Estimated Crime, pg. 12), an accurate figure for the total number of crimes that occured in Ohio is not possible.

The figures below are an estimate taken from the FBI/UCR statistics projecting the total crime in Ohio.

These estimated crime rates and totals are calculated by estimating the crime rate for those agencies reporting less than twelve months and adding that estimate to the actual figures submitted by full twelve-month UCR contributors. This 1981 statewide FBI/UCR estimate of crime is also reproduced in Table 24, (pgs. 126-127). It is used for comparison with the actual state totals of contributing agencies (which represent approximately 94.3% of the state population).

Year	Ohio Population		Total Crime Index	Violent[3] Crime	Property[4] Crime
1968	10,591,000	Number	294,529	21,228	273,301

*LESS THAN STATE POPULATION BECAUSE ALL AGENCIES DID NOT SUBMIT EMPLOYEE INFORMATION

Appendix

Footnotes

1. Factors other than population that also influence crime rates include level of economic activity and unemployment; the cultural, religious, racial and age mix of the population; the time of day, day of the week, or the season of the year; local standards and enforcement policies; proximity to a metropolitan area; and, transience of the population, among others.
2. Table I figures include Ohio State Highway Patrol reported officers assaulted. Officer assaults and the number of Patrol employees (page 139) are the only statistics submitted by OSHP. All offense or arrest statistics involving OSHP are submitted by the individual police jurisdictions where the offense occurred.
3. Violent crime includes the offenses of murder, rape, robbery, and aggravated assault.
4. Property crime includes the offenses of burglary, larceny, and motor vehicle theft.
5. The bar graphs of this type throughout this publication indicate the crime rates of offenses per 100,000 population, crime percentage information for populations, and the actual number of offenses reported by all 12 month contributors. Crime rates are calculated on the basis of actual offenses submitted by 12 month contributors only, and for this reason the numbers of offenses listed are lower than those actually submitted by both "12 month" and "less than 12 month" contributors.
6. "Other dangerous weapons" that were reported in 1981 to be responsible for murders were a variety of unknown weapons.
7. Commercial establishments include such businesses as drug stores, theaters, grocery stores, and finance companies. Excluded are service stations, chain stores, and banks which are listed as separate robbery categories.
8. The type of larceny "from motor vehicle" refers to theft of items being transported in a motor vehicle, and not automobile accessories or attachments.
9. Motor vehicle parts and accessories are those items which are attached to and/or are necessary to the operation of the vehicle.
10. The Stolen/Recovered portion of this table contains supplementary information which is not always reported.
11. Sources for 1968-1981 information in Table 17 are **Crime in the U.S., 1980,** and preliminary estimates for **Crime in the U.S.—1981,** from the Federal Bureau of Investigation, Washington, D.C. The number of offenses are estimated on the basis of 100% of state population, all contributing a full 12 months.
12. Clearance figures published in this table contain information of Part I offenses. Also, a single clearance of a case may consist of multiple arrests or clearance by some means other than arrest.
13. Population figures are Bureau of Census counts of 1980 Ohio population. All county sheriffs office figures reflect only the population covered by the sheriff's jurisdiction. Individual population figures for contributors lying within the geographical area of each county are listed as separate entries throughout Table 24.
14. County population figures in this table are calculated with data provided by the Bureau of Census and are based on a total of population covered by the county sherriffs office plus all populations lying within the geographical area of the county. They represent the Bureau of Census county of 1980 and, therefore, include population of non-contributors.
